RAVILLA KEERTHI NAIDU

CLOUD DEVOPS ENGINEER

EDUCATION

Bachelor of Computer Applications
Sri Venkateswara University, India, Tirupati
2014-2017

PGDM – IT and Finance
ISBR Business School, India, Bengaluru
2017-2019

PROFESSIONAL SUMMARY

With over 6+ years of hands-on DevOps experience, I specialize in cloud platforms, CI/CD automation, Kubernetes orchestration, and infrastructure as code. I bring strong expertise in Terraform, GitOps, monitoring, and AI-driven automation, ensuring high availability for critical applications and driving successful outcomes for organizations. Focused on scalable delivery pipelines that enhance reliability, security, and operational efficiency.

SKILLS SUMMARY

- **AWS Expertise**
  Proficient in configuring and managing a wide range of AWS services, including **EKS, ECR, CloudFront, KMS, Route53, VPC, WAF, Secrets Manager, RDS, S3, and EC2**.
- **Kubernetes, Docker & Helm chart**
  Created Helm charts for efficient deployment and management of applications on EKS clusters.
- **Cloud Infrastructure Automation**
  Developed **Terraform** scripts for infrastructure provisioning, including ECR, KMS, VPC, RDS, S3, CloudFront, and Secrets Manager.
- **Azure DevOps For CI/CD**
  Experienced in building end-to-end CI/CD pipelines using **Azure DevOps** and **GitHub Actions** to automate builds, MSIX packaging, **Docker** image generation, and artifact publishing for **C#, C++, Node.js, React.js, and Python** projects. Skilled in creating reusable pipeline templates and delivering reliable, scalable workflows across **GitHub Packages, Nexus, Azure Artifacts, and ECR**.
- **AI-Driven Automation**
  Hands-on experience using **AI agents in VS Code** along with **GitHub MCP and Jira MCP services** to automate PR workflows, fetch and summarize comments, track story updates
- **GitHub Actions**
  Developed GitHub workflows to enhance pull request (PR) processes, including adding merge validation tasks and other custom PR validations to improve code quality and streamline reviews.
- **FluxCD/ArgoCD for GitOps**
  Developed FluxCD for continuous deployment (CD) workflows, enabling GitOps-driven automation for Kubernetes clusters. Ensured consistent synchronization between Git repositories and cluster states.
- **Monitoring and Alerting**
  Proficient in setting up **Prometheus** & **Grafana** monitoring with custom expressions for API, CPU, and storage usage monitoring, as well as system-level services, Configured Alert manager to trigger alerts and notifications via MS Teams and Outlook, ensuring timely incident response.
- **Infrastructure Automation**
  Designed and developed **Ansible** scripts for automated deployment with required libraries and services installation on target nodes/servers, managing Node.js as a PM2 service, and Python in a virtual environment using **AWX Tower** as a deployment UI tool.
- **Micro-Frontend Ecosystem Management**
  Proficient in managing a large-scale MFE architecture with 160+ Micro-Frontends and 40+ NuGet repositories, ensuring version consistency, smooth integration, and stable end-to-end build operations across complex application environments.

- **Database and Services Management**
  Successfully set up and managed various services, including MySQL, MongoDB, RabbitMQ, Minio, AWX, Redis, Grafana, and Supervisor, as Docker containers on Ubuntu servers.
- **Expertise in Linux Environment**
  Possess expert knowledge in Linux environments, enabling efficient system administration and troubleshooting.
- **Languages/Scripting**
  Python, Shell Scription, Power Shell and Yaml.

PROJECTS/EXPERIENCE

- **HPX (**HP Application) **NOV 2024 – PRESENT**
  Senior Project Engineer
  Wipro LTD / India, Bangalore
  - Developed reusable pipeline templates for C#, C++, Node.js, React.js, and Python repositories to build and publish packages to GitHub Packages, Nexus Repository, and Azure Artifacts (NuGet).
  - Leveraged AI agents in VS Code and implemented GitHub MCP and Jira MCP services to automate PR management, retrieve latest PR comments/updates, generate summaries, and fetch Jira story/comment summaries.
  - Containerized services using Docker and deployed/managed 4 microservices in AWS EKS, with GitOps workflows implemented through FluxCD and Helm charts.
  - Managed AWS infrastructure and application services using Terraform, ensuring consistent, scalable, and version-controlled provisioning.
  - Led the development and optimization of Azure DevOps pipelines to reliably build, sign, package, and generate MSIX bundles for the HP application, ensuring consistent deployment quality across environments.
  - Manage and support over 160+ Micro-Frontends (MFEs) and 40+ NuGet repositories, ensuring reliable integration, version alignment, and successful end-to-end builds across the HP application ecosystem.
  - Built automation pipelines for Lokalise, enabling auto-creation of translation tasks and streamlined management of localization requests.
  - Created workflows using GitHub Actions for automated builds, validations, labeling, and PR milestone management.
  - Developed multiple PowerShell automation scripts to enhance build pipelines, including validation tasks, PR labeling, and milestone transitions.
  - Built pipelines to compile and publish application packages to Azure Container Registry.
  - Integrated Applitools with Azure DevOps for automated visual regression testing.

- **Agent-AI** (HP printer analytical tool) **FEB 2024 – NOV 2024**
  Senior Project Engineer
  Wipro LTD / India, Bangalore
  - Developed Helm chart for Agent-AI API deployment in Kubernetes cluster.
  - Established Azure DevOps pipeline for building and publishing Helm chart to Docker Harbor repository.
  - Implemented FLUX for Kubernetes instance for efficient continuous deployment.
  - Integrated FLUX tool into Kubernetes cluster for automated continuous deployment of API.

- **i360** HP Insight 360 (HP printer analytical tool) **DEC 2022 – FEB2024**
  Senior Project Engineer
  Wipro LTD / India, Bangalore

- Configured and managed AWS services like EKS, ECR, CloudFront, KMS, Route53, VPC, WAF, Secrets Manager, RDS, S3, EC2
- Developed Terraform script Creation for ECR, KMS, VPC, RDS, S3, CloudFront, Secrets Manager.
- Developed helm chart for EKS deployment.
- Developed Azure DevOps pipeline for CI to build as a docker image and publish to ECR.
- Created Flyway dB image to deploy/update schema changes related RDS configured using helm chart for deployment.
- Expert knowledge in Linux environment.
- Led the implementation of infrastructure and service decommissioning for Project i360 utilizing Terraform and the AWS console and Produced detailed decommissioning documentation for Project i360.

- **Gription/Sage3D** (HP 3D printer analytical tool) **MAY 2021 – DEC 2022**
  Senior Project Engineer
  Wipro LTD / India, Bangalore
  - Developed Helm charts for the deployment on Kubernetes cluster for all NodeJS, ReactJS and python services.
  - Developed Azure DevOps CI pipeline template to build and publish packages into nexus artifact for python, ReactJS and NodeJS.
  - Developed deployment automation ansible script to run NodeJS as a pm2 service and python in an virtual env using AWX Tower as a deployment UI tool.
  - Packaged NodeJS, ReactJS and python as docker images and published into Docker harbor or nexus artifact by creating azure DevOps pipeline.
  - Developed Prometheus expressions to monitoring both API, CPU and storage usage & system level services.
  - Setup Alert manager to trigger alerts and notify via MS Teams and Outlook.
  - Developed python script for package migration from private artifact to local artifact.
  - Setup of Mysql, Mongo dB, RabbitMQ, Minio, AWX, Redis, Grafana, Prometheus, Supervisor as dockers services on Ubuntu server.
  - Creation of Grafana monitoring and data visualization dashboard to list required monitoring services data using Prometheus and Mysql as a data source.
  - Setup of Kubernetes in single box environment. .
  - REDIS setup in a cluster environment and Nginx logs improvement.
  - Arango dB Set up for restoration of S3 bucket data uses AWS CLI command in ubuntu machine to pull data from S3 buckets.

- **Internal Web Application** (Internal Application for title) **APR 2020 – APR 2021**
  ASSOCIATE
  Shovel Technologies / India, Tirupati
  - Deployed deployment automation script using Ansible Playbooks for internal application.
  - Creation of CI pipeline through **Jenkins**
  - System and server's management
  - **VMware** integration to servers with EXSi

- **Income and Market Claims** **APR 2019 – OCT 2019**
  Analyst
  Northern Trust / India, Bangalore
  - Worked as an Analyst to verify and process of inflow and outflow incomes and claims.
